Prickly spider-flower

Grevillea juniperina, commonly known as juniper- or juniper-leaf grevillea is a plant of the family Proteaceae native to eastern New South Wales and south-eastern Queensland in Australia.
A small prickly leaved shrub between 0.2 and 3 m (8 in to 10 ft) high, G. juniperina grows generally on clay-based or alluvial soils in eucalypt woodland. The flower heads, known as inflorescences, appear from winter to early summer and are red, orange or yellow. Grevillea juniperina adapts readily to cultivation and has been important in horticulture as it is the parent of many popular garden hybrids.ï*Grevillea juniperina*ï adapts easily to cultivation and grows in a wide range of soils and aspects in locations with good drainage.

Category: Grevillee & Leptospermum
Families: Proteaceae
Genus: Grevillea
Species: juniperina
Geographical Area of Origin: Oceania
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Shrub
Leaves: Treadlike filament / Needle-like
Colore Foglie: Verde
Flowering Period: Gennaio / Febbraio / Marzo / Aprile / Maggio / Giugno / Luglio / Agosto / Settembre / Ottobre / Novembre / Dicembre
Flower: Simple flower
Colore Fiori: Giallo ï Rosso
Favorite soil: Sub-acid / medium acid / Acid / Light sandy / Middle-Dough / Medium soil
Water needs: Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Tree / Grown as shrub / bush

Colore Frutti: Marrone
