Lemox

The Lemox is a triploid hybrid obtained by crossing the Femminello lemon x Pear lemon hybrid (1952-36B-69) with the Double Lentini lemon, developed and patented by the researchers at the CRA-ISAGRU of Acireale (CT). The plant is average sized, with a spreading growth habit and many medium-sized thorns. The completely seedless, elliptic fruit is yellow when ripe, with fine-grained rind. It starts to ripen during the first ten days of October, when most of the fruit reach an average weight of 120 g.
The Lemox can be considered the first hybrid with fruit characteristics very similar to those of the true lemon.

Category: Citrus
Families: Rutaceae
Genus: Citrus
Species: lemox (Limone Femminello x Pera del commendatore)
Geographical Area of Origin: South-East Asia
Climatic Zones: Sub-tropical, USDA 10 b (Southern Italy and islands)
Habit: Shrub
Leaves: Evergreen
Colore Foglie: Verde
Flowering Period: Marzo / Aprile / Maggio / Giugno / Luglio / Agosto / Settembre
Flower: Simple flower
Colore Fiori: Bianco
Favorite soil: Sub-acid / medium acid / Middle-Dough / Medium soil
Water needs: Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Tree
Colore Frutti: Giallo
Parfumed: yes
