Gardenia multiflora

Gardenia multiflora is a beautiful evergreen ornamental plant with a large bright green leaves; the flowers appear between spring and autumn, medium to large, are pure white with many petals and fragrant. We recommend growing Gardenia multiflora in a container so that it can be protected during the coldest periods. It prefers slightly acid soils and partial shade positions.
There are two categories of this gardenia, regardless of the forms, those grown in a heated greenhouse and one grown in a cold greenhouse. The first ones with slightly higher cost, guarantee a greater homogeneity of the flowering both qualitatively and quantitatively, reducing the floral abortion.

Category: Indoor plants
Families: Rubiaceae
Genus: Gardenia
Species: multiflora
Geographical Area of Origin: South-East Asia
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Shrub
Leaves: Evergreen
Colore Foglie: Verde
Flowering Period: Marzo / Aprile / Maggio / Settembre / Ottobre
Flower: Double flower
Colore Fiori: Bianco ï Giallo
Favorite soil: Sub-acid / medium acid / Middle-Dough / Medium soil
Water needs: Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Spiral / Grown as shrub / bush
Colore Frutti: Marrone
Parfumed: yes
